

# ExpressAnalyst: Tutorial 1

## Overview

-- Comprehensive platform for gene expression and meta-analysis

# Intro to ExpressAnalyst

- Web platform for the analysis of gene expression data and meta-analysis
  - Previously part of NetworkAnalyst
- Designed for bench researchers rather than specialized bioinformaticians
- Integrates data processing, statistical analysis and data visualization to support:
  - Data comparisons
  - Biological interpretation
  - Hypothesis generation

Tutorial 1: Overview

• Starting from a list of gene IDs

Enrichment Analysis

Tutorial 2:  
Gene list

• Starting from a single gene expression table

Expression Profiling

Tutorial 3:  
Expression

• Starting with several gene expression tables

Meta Analysis

Tutorial 4:  
Meta-analysis

# Computer and browser requirements

- A modern web browser with JavaScript enabled
- Supported browsers include Chrome, Safari, Firefox, and Internet Explorer 9+
- For best performance and visualization, use:
  - Latest version of Google Chrome
  - A computer with at least 4GB of physical RAM
  - A 15-inch screen or bigger (larger is better)
- Browser must be WebGL enabled for 3D scatter visualization
- 50MB limit for data upload
  - ~300 samples for gene expression data with 20 000 genes

# NetworkAnalyst vs ExpressAnalyst

- Previous NetworkAnalyst platform has been divided into two distinct web tools.
1. NetworkAnalyst is now dedicated to knowledge-driven network analysis using gene list as input.
  2. ExpressAnalyst focuses on gene expression profiling and meta-analysis.

# What's new?

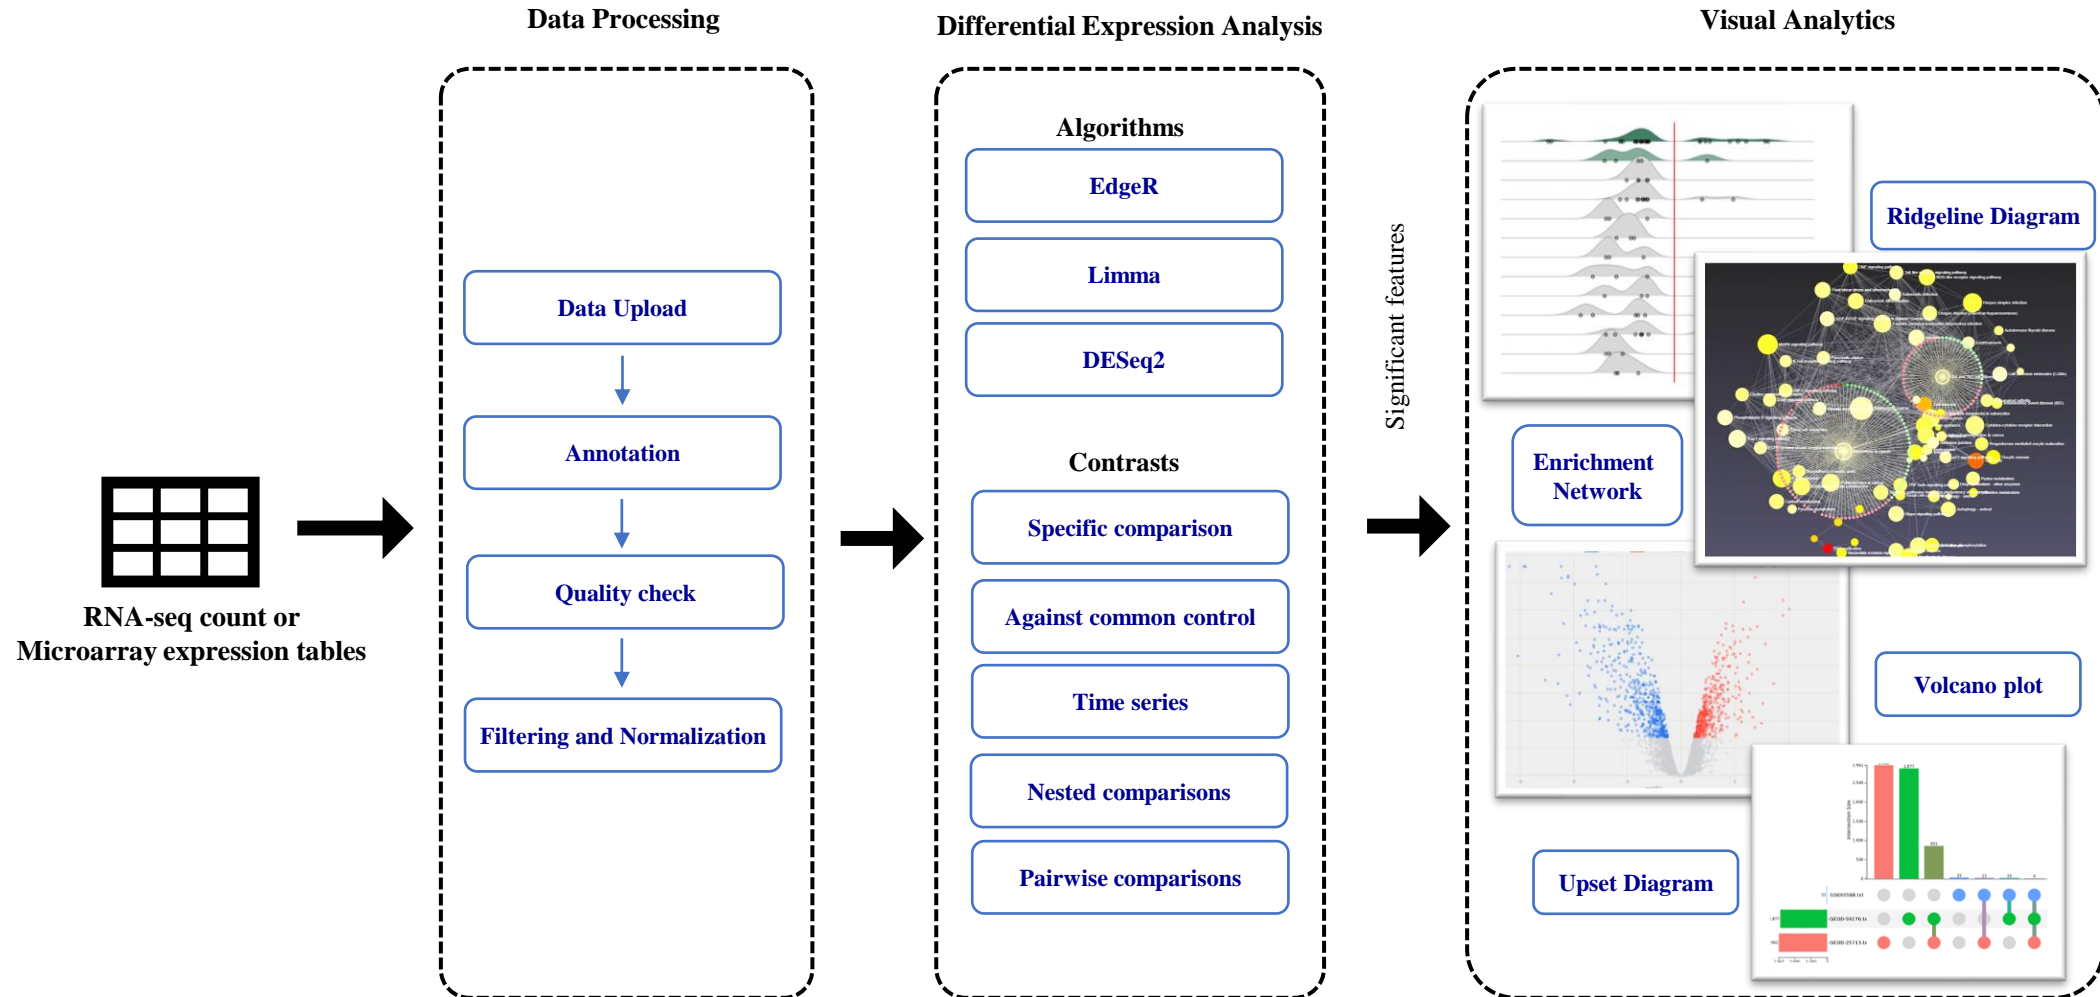

- Ridgeline diagram to assess gene expression levels of enriched pathways
- UpSet diagram to visualize intersections of multiple datasets
- Revamped volcano plot, heatmap and 3D scatter plot visualization
- New interface

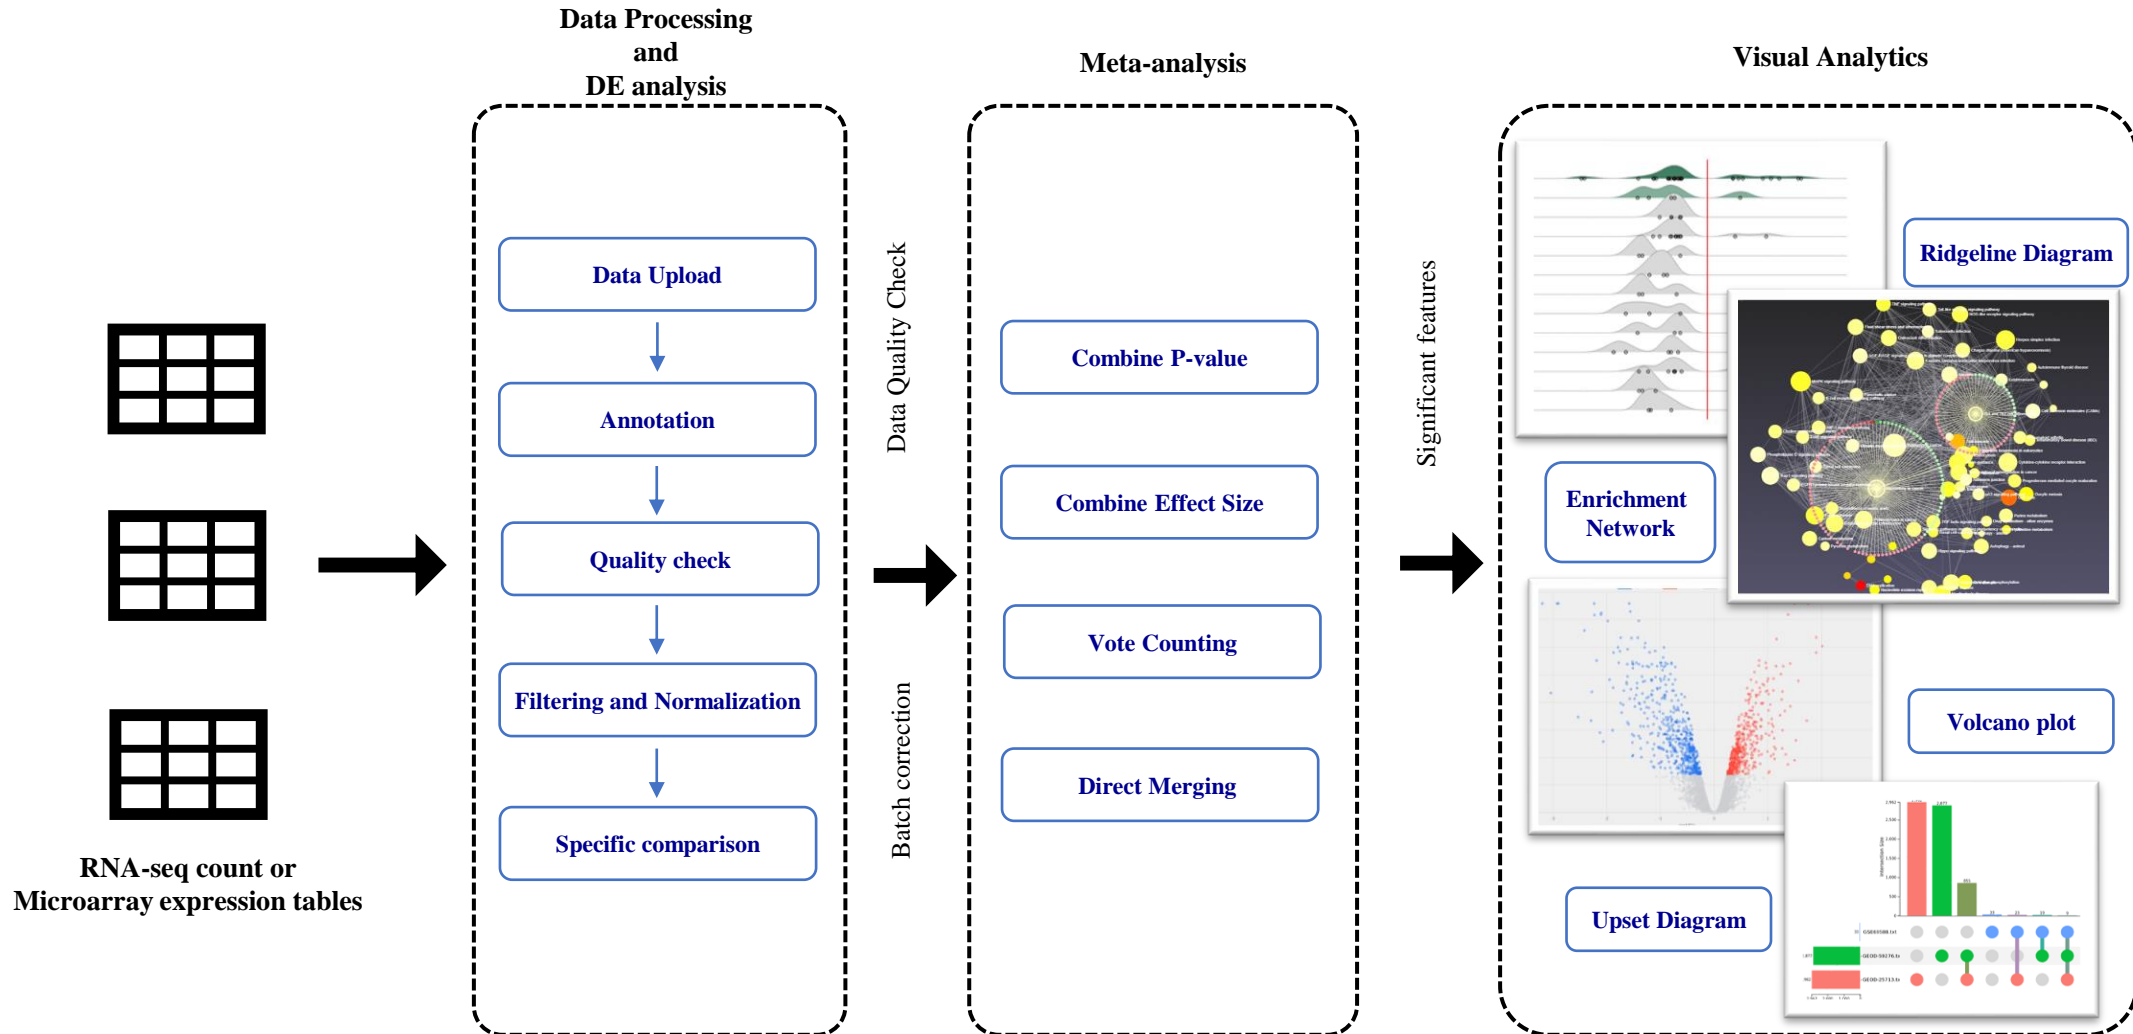

# Overview

- Goal: To provide an integrative web-based framework for data processing, functional analysis and visualization of various forms of gene expression data.
  - Gene list(s)
  - Gene expression data matrix
  - Multiple gene expression data sets
- Overall approaches:
  - Advanced statistical methods coupled with interactive data visualization system.
- 50MB limit for data upload
  - ~300 samples for gene expression data with 20 000 genes

# Gene expression workflow

# Meta-analysis workflow

# Functional profiling

- Overrepresentation analysis (ORA)
- Cut-off free functional enrichment analysis methods
  - Gene Set Enrichment Analysis (GSEA)
- Interactive volcano plot
- Advanced diagnostic plots for quality check purposes
- Dimension reduction: 3D PCA
- Intersection analysis (for multiple datasets)

# Raw data processing using EcoOmicsAnalyst

- ExpressAnalyst is dedicated for secondary and tertiary transcriptomics data analysis.
- For raw data processing please consider using EcoOmicsAnalyst.
- Its objective is the conversion of RNAseq reads from **ANY** species to functionally annotated count tables (especially useful for non-model species)

# Diagnostic plots

Density plot

PCA plot

Mean Standard Deviation (MSD) plot

# Interactive volcano plot

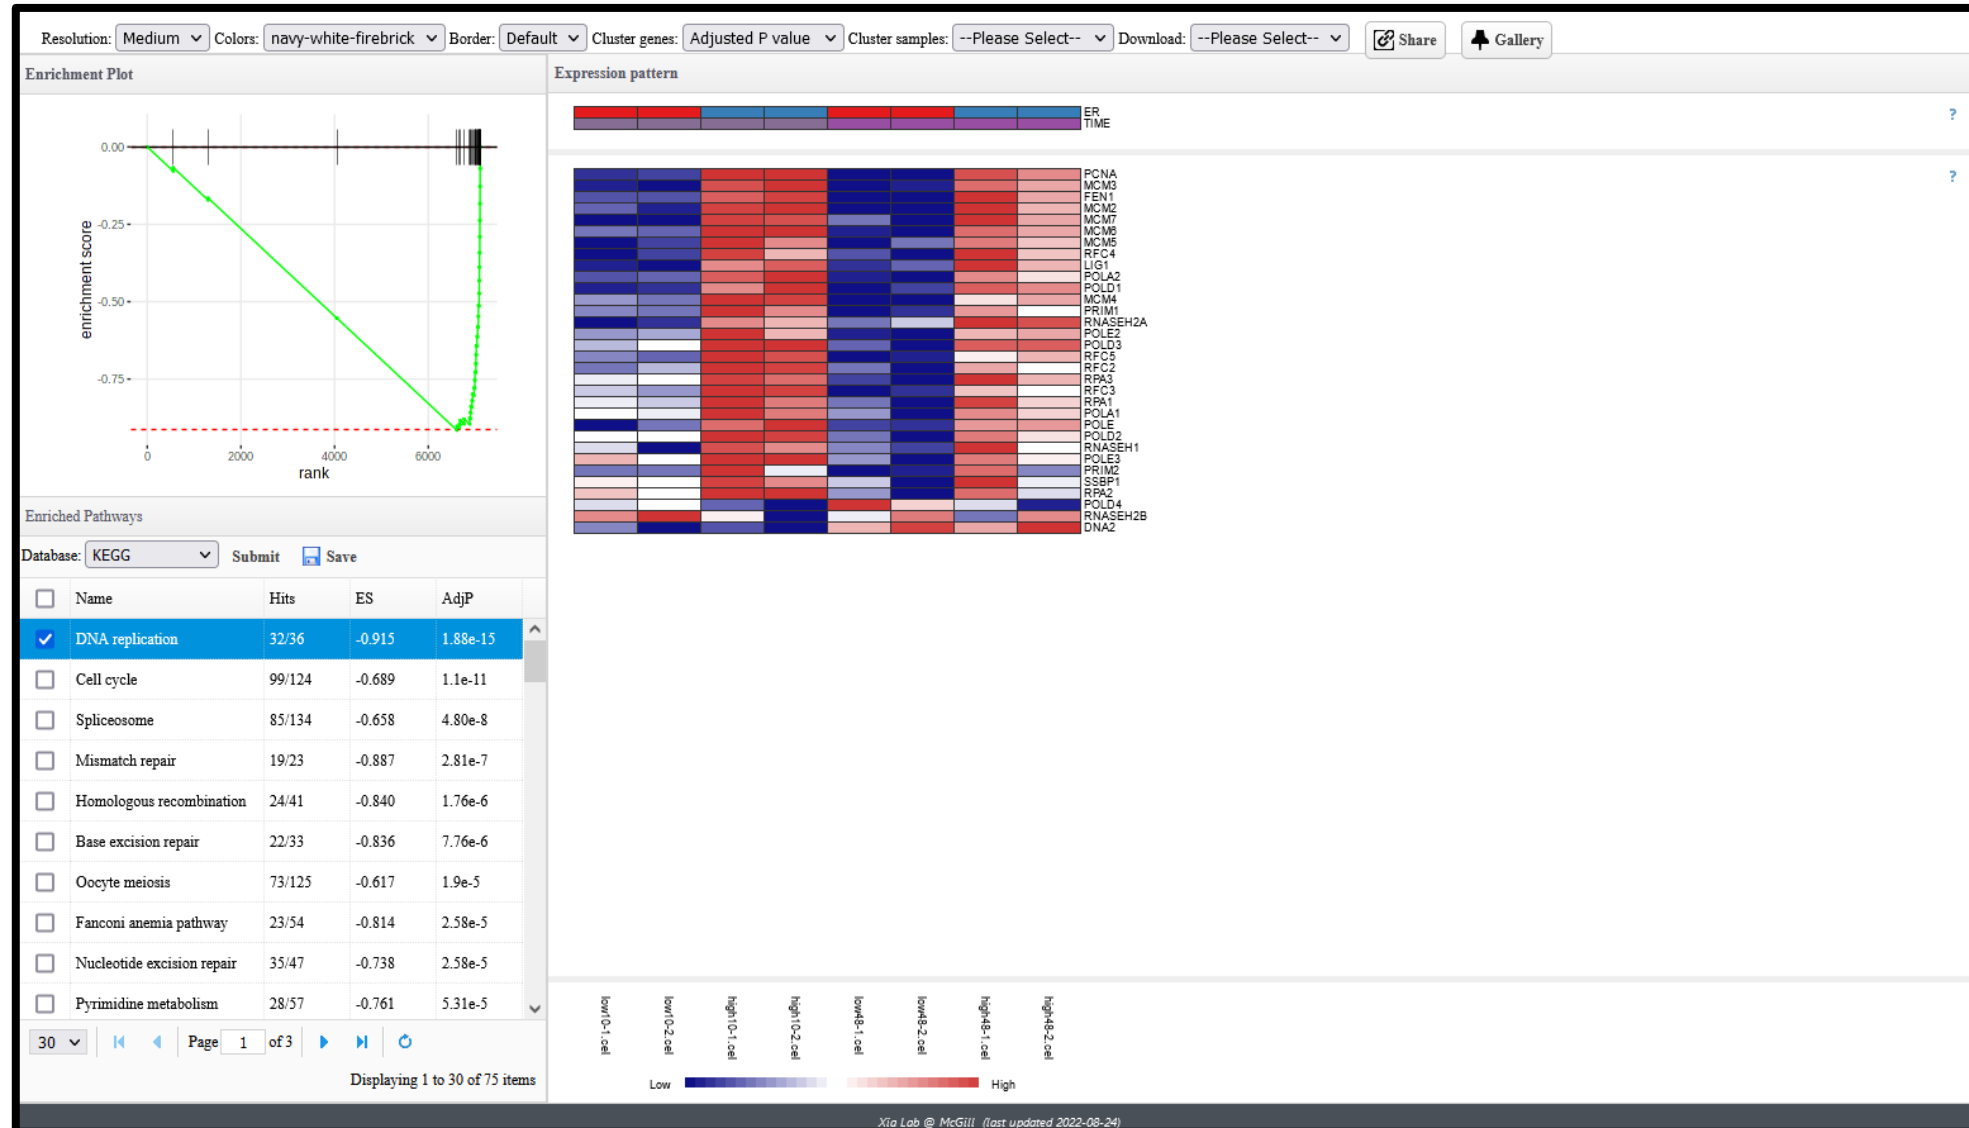

# Upset diagram

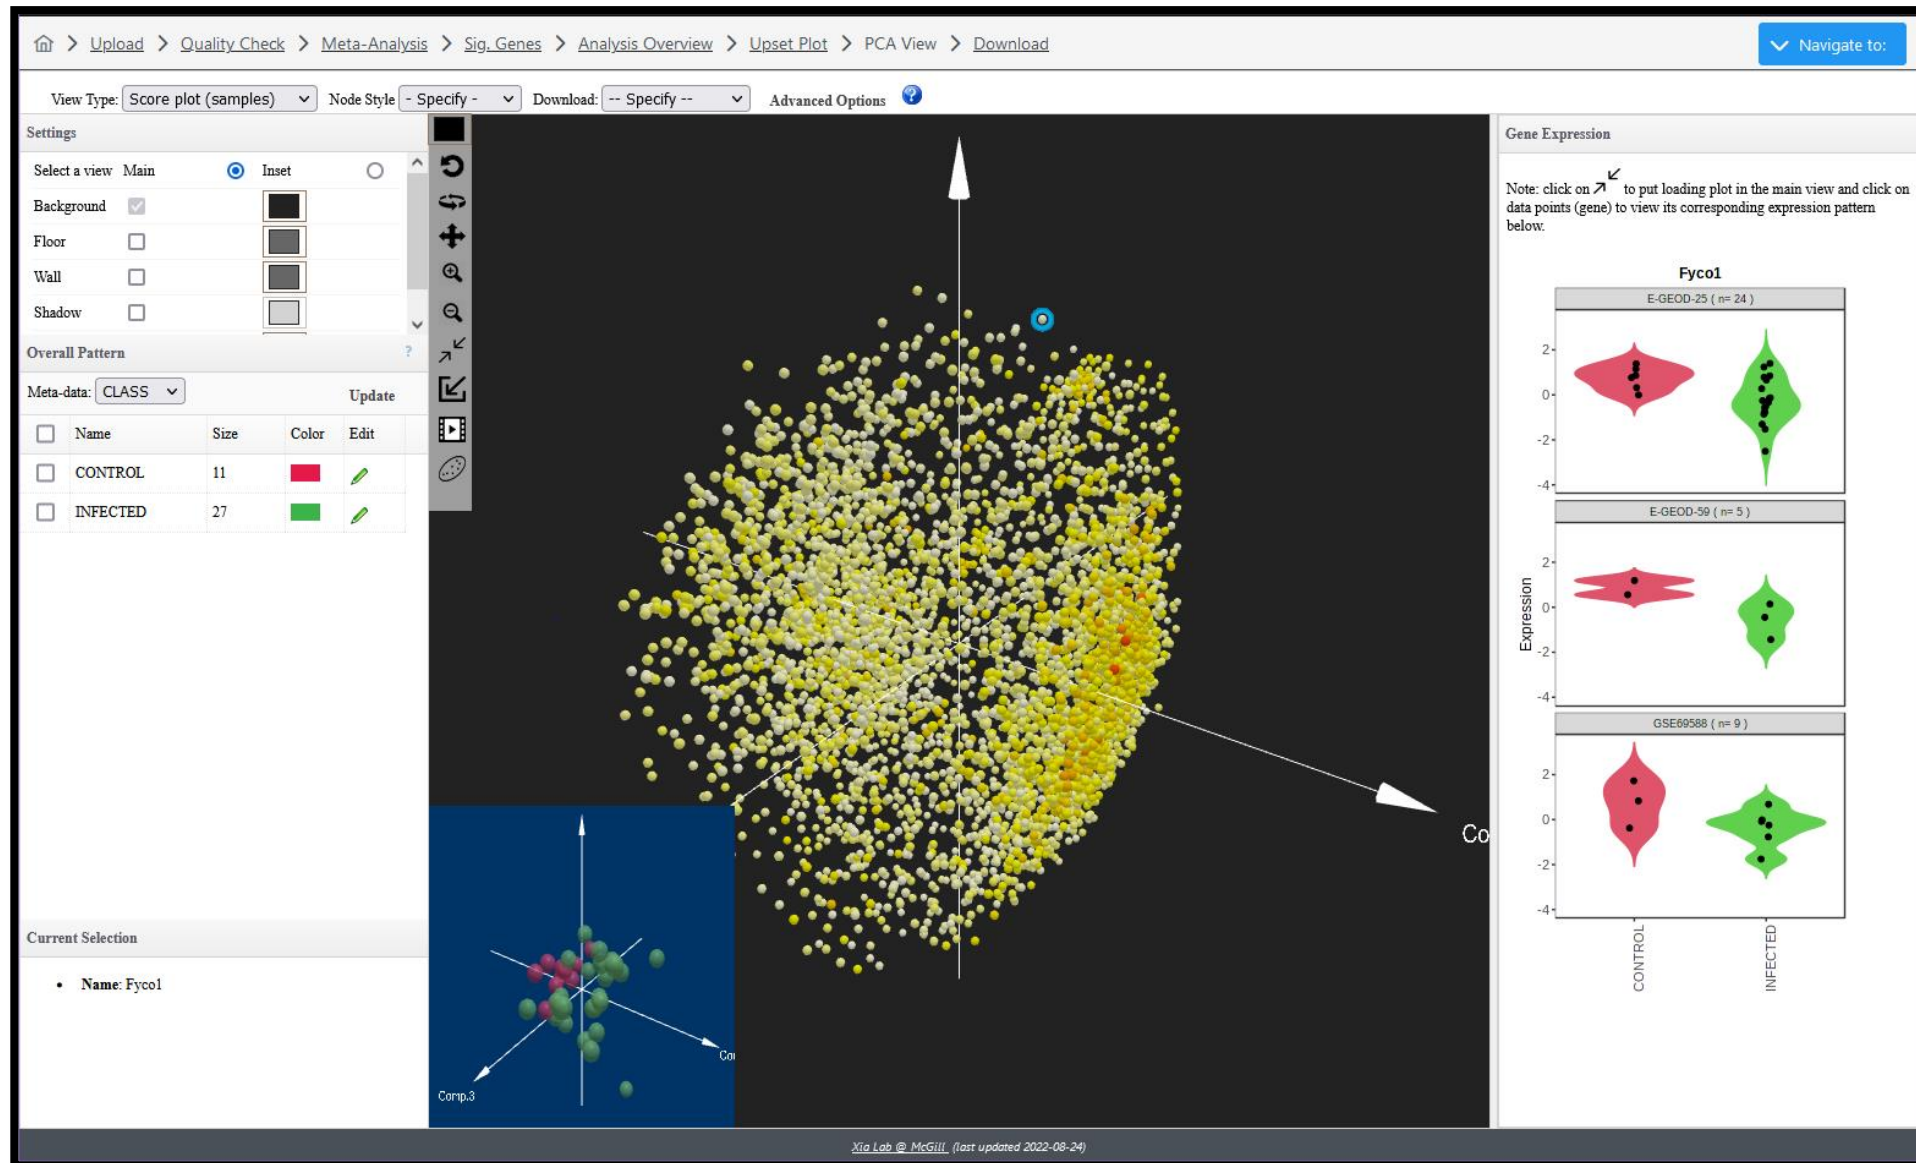

# Enrichment Network

# Interactive heatmap

# Interactive scatter plot

# The End
